

Hybel runs every build with a real-time overview

One of Denmark's largest house builders coordinates subcontractors, deliveries and documentation in Geniebelt.

"Geniebelt has helped create a more agile day-to-day. We get a better real-time overview of our builds — and of when each subcontractor needs to show up and carry out a piece of work."

Jesper von Essen
Head of Production, Hybel

Jesper von Essen is Head of Production at Hybel on Zealand. Every day his site managers coordinate subcontractors and deliveries across active construction sites — and the day-to-day runs in Geniebelt.

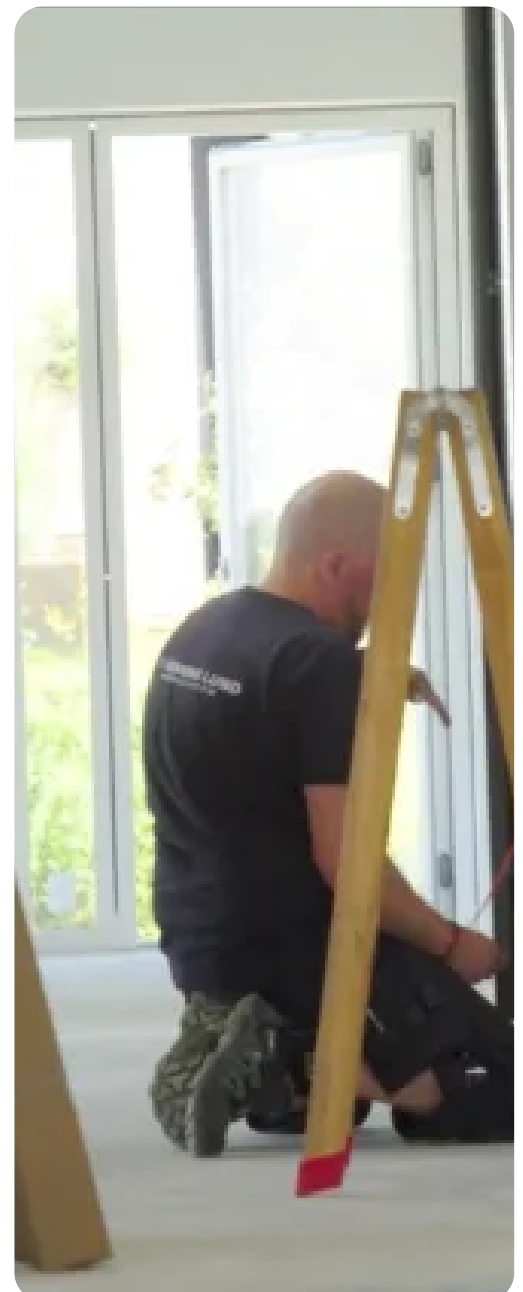

» A clear picture — here and now

"Our site managers have a much better feel for when each subcontractor needs to be on site. If challenges come up that force us to change the schedule, we have a clear picture here and now."

» Notified right away

"Each subcontractor knows when he needs to go out and carry out a piece of work. If anything changes, they're notified right away. The same goes for deliveries from our suppliers, who also have a better overview of when those deliveries arrive."

"When we have a good overview of what's happening on our sites, the site manager is in a far better position to act on it — and to plan both his own day and the subcontractors' day better."

"In planning terms, CrossProject is the most important tool when we sit down to form an overview of how things look across all our builds."

Jesper von Essen, Head of Production

» Overview across projects

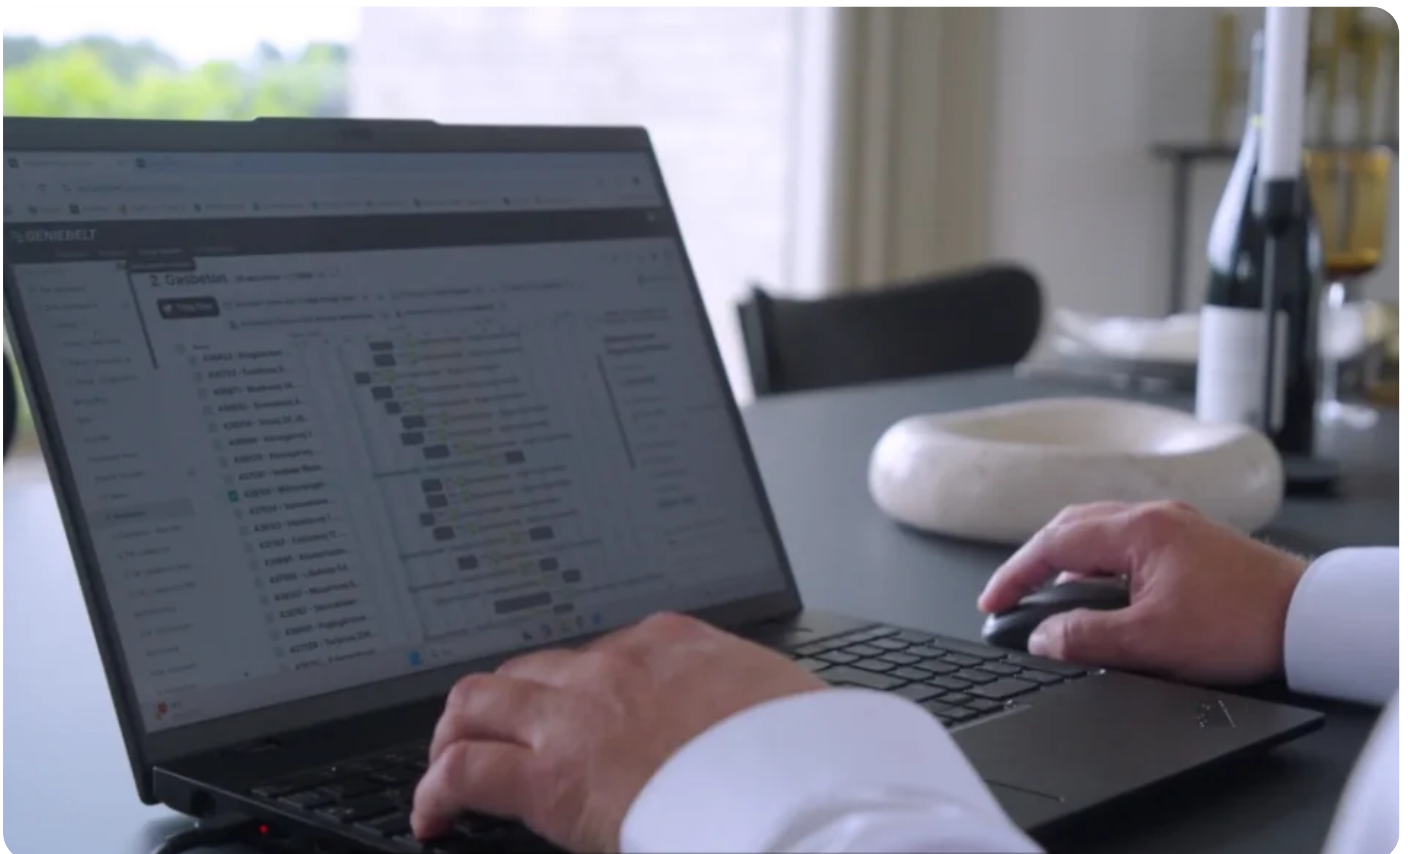

"It creates a good overview for all our site managers that they can look into each other's projects too — so they know a carpenter is running late on one job. With CrossProject it's easy for them to find out where that carpenter is due to work next."

» Integrated with ERP, CRM and SharePoint

"We have integrations where our ERP works together with our CRM systems and SharePoint solutions. That makes it possible to update other systems with which subcontractors have been out on the different builds. Data flows both from and to Geniebelt, and we get a lot of value from that every day."

» Documentation that stands up

"With Geniebelt we have it all in one place, where we can go back, look at a roof and see what happened in the history. Documentation matters more and more in a world where you have to be able to assure quality — and where we have to stand behind what we build. If a carpenter calls in with a specific challenge, he can upload photos or video to Geniebelt, so we can see from a distance what the challenge is and how we solve it."

What construction companies get with Geniebelt

01 Real-time site management

Follow progress exactly as it happens, with real-time updates from the site. Schedules aren't outdated before they travel from office to site hut.

02 Stronger collaboration

Bring tradespeople and material suppliers together in one platform that works on mobile — with a clear overview and all communication in one place.

03 Standardised workflows

Reuse templates across builds so every team follows the same high standard. Roll out updates instantly.

04 Full resource overview

Build and keep an overview of projects and resources, and allocate people as the project count grows.

05 Complete audit trail

Document what was agreed, who did what and when. That puts every party in a better position if disagreements arise.
